READ ME:

1. Please Use Google Colab to run my code.
2. In Google Colab: file→Open Notebook→ upload→ select my **.ipynb** file and open it
3. In the first cell of the code, when you run, it will ask to upload files.
4. Please check the name of the files, in my code I have used following names:
5. Assignment3-train.txt – for train data
6. Assignment3-test.txt –for test data
7. Please run each code block, in AdaBoost().fit(x_train, y_train, iterats=200) function please change iterations(iterats) to get different error rates and accuracies of a training model.
7. Finally in the last code block it generates an assignOut.txt file, it consists of a predicted number of test data.
8. You can find assignOut.txt in the files section of google Colab.
